Biological Evaluation of Some New 1,3,4-Oxadiazole Derivatives

Nazia A. Rashidi

Assistant Professor, Shri Mungsaji Maharaj Mahavidyalaya, Darwha Dist: Yavatmal (M.S), India

Abstract: A new framework of 1, 3, 4-oxadiazole derivatives having substituents at 2nd and 5th position has been synthesized and evaluated for their antimicrobial activity using well diffusion method. Antifungal activity was performed against the fungus *A. Niger*, *Trichoderma viride* and *C. albican*. Amphotericin were used as standard drugs for antifungal activities, respectively. Antimicrobial studies revealed that few compounds exhibited weak activity against tested organisms.

Keywords: 1, 3, 4-Oxadiazole, Antimicrobial activity, Amphotericin

1. Introduction

Literature survey reveals that 1,3,4-oxadiazole nucleus showed a great deal of variety of application in pharmaceutical, medicinal as well as application in polymer and material science [1]-[7] and have wide variety of synthetic route [8]-[11]. Synthesis of 1,3,4-oxadiazole is centered on the cyclodehydration of carboxylic acid hydrazides or the oxidation of hydrazones using various oxidizing agents. They are frequently used as an ester or amide substituent in medicinal chemistry [12]. Here 1,3,4-oxadiazole derivatives were synthesized by condensation of different acid hydrazides with carbon disulphide and potassium hydroxide in absolute ethanol. And in search of new bioactive oxadiazole derivatives with better antimicrobial activities herein is evaluated some newly synthesized oxadiazole derivatives for their antifungal activities.

2. Material and Methods

Chemistry

At the outset acid hydrazides were obtained from esterification of corresponding acids followed by treatment

with hydrazine hydrate in absolute ethanol. The acid hydrazides were then condensed with carbon disulphide and potassium hydroxide in absolute ethanol to yield corresponding 2,5-disubstituted 1,3,4-oxadiazole. The structure and purity of the compounds synthesized was confirmed by elemental analysis and spectral methods: IR, ¹H NMR and TLC.

Biological Activities

The microbiological assay was based upon a comparison of inhibition of growth of microorganisms by measured concentrations of test compounds with that produced by known concentration of a standard antibiotic. The antimicrobial activity of a compound is generally expressed as its inhibiting effect toward the growth of the bacterium in nutrient broth or nutrient agar. For the evaluation of antimicrobial viz., antibacterial and antifungal activity various methods have been proposed and adopted for the measurement of antimicrobial activity [13]-[16]. In present antimicrobial study the newly synthesized 1,3,4-oxadiazole derivatives (a-f) were screened for their antifungal activity study using well diffusion method.

A series of compounds subjected to antimicrobial screening having general formula (IIIa-f) are listed below

Scheme : 1

- a. 5-(4-nitro phenyl) -1,3,4-oxadiazole-2-thione (IIIa)
- b. 5-(benzyl) -1,3,4-oxadiazole-2- thione (IIIb)
- c. 5- phenyl -1,3,4-oxadiazole-2- thione (IIIc)
- d. 5-(2-hydroxy phenyl) -1,3,4-oxadiazole-2- thione (IIId)
- e. 5-(2-chloro phenyl) -1,3,4-oxadiazole-2- thione (IIIe)
- f. 5-(pyridine-4-yl) -1,3,4-oxadiazole-2- thione (IIIf)

Antifungal activities:

The antifungal activity was performed using well diffusion method. The fungus used were - *Aspergillus niger*, *Trichoderma viride* and *C. albicans*.

The medium used for the study of antifungal activity of these newly synthesized compounds having following composition, was of fungistatic grade. It was found to be suitable for the growth of fungus, *A. Niger*, *Trichoderma viride* and *C. albican*. used in the present study.

Preparation of medium:-

Media Used: Czapek-Dox Agar: Composition (g/l) Sucrose-30.0; Sodium nitrate-2.0; K₂HPO₄-1.0, MgSO₄. 7H₂O-0.5; KCl-0.5; FeSO₄-0.01; Agar-22; Czapek-Destrox agar medium was prepared by dissolving 56.01 g of ingredients in 1000.0 ml of distilled water. Initially, the stock cultures of were revived by inoculating in broth media and grown at 37°C for 24hrs.

All the compounds were dissolved in dimethyl sulfoxide to give a concentration of 10 mg/ml. The agar plates of the above media were prepared and wells were made in the plate. Each plate was inoculated with 24 h old cultures (100 µl 10⁴ CFU) and spread evenly on the plate. The control wells were filled with antibiotic Amphotericin used as standard. All the plates were incubated at 37°C for 24 h. The zone of inhibition was recorded after incubation for 24 hrs at 37°C using antibiotic zone scale. and the diameter of inhibition zone were noted in mm. The inhibition zone record of the compounds clearly indicate that the compound is active against fungal.

3. Results and Discussion

The present antimicrobial study deals with the antifungal activity of the following newly synthesized compounds (Ia-f) as shown the structure in fig.1.

The antifungal activity and inhibition effect of the test compounds on the growth of fungus *A. Niger*, *Trichoderma viride* and *C. albican*. are summarized in Table -1. All the compounds showed activity against *A. Niger*, *Trichoderma viride* and *C. albican*.

The 5-(aryl)-1,3,4-oxadiazole-2-thione (a-f) showed moderate to good activity on fungal strain.

Table 1: Antifungal assays of synthesized compounds.

Compounds	Inhibition zone recorded in mm		
Micro organism	<i>A. Niger</i>	<i>Trichoderma viride</i>	<i>C. albican</i>
a.	36	41	33
b.	34	34	31
c.	33	38	30
d.	34	40	32
e.	35	39	31
f.	32	36	30

4. Conclusion

Some new 5-(aryl)-1,3,4-oxadiazole-2-thione (a-f) (a-f) were screened for their antifungal activity against *A. Niger*, *Trichoderma viride* and *C. albican*. The minimal inhibitory concentrations (MIC) of all the compounds were determined by observing the zones of inhibition formed after 24h of incubation for antifungal activities. Compounds were found to have moderate to good antifungal activity.

5. Acknowledgement

The author wishes to express her thanks to the Dr. B.N. Berad for his valuable guidance. She is also thankful to the Biogenics, Research and Training Centre in Biotechnology Hubli, Karnataka for providing biological screening report.

BENEFITS OF TECHNOLOGY IN EDUCATION

P.H. BHAGWAT

Asstt. Prof .in Chemistry, Mungasaji Maharaj Mahavidyalaya, Darwha.

Email – phbhagwat@gmail.com , 8999435307

Abstract –

It is important to acknowledge that students are already interested and engaged in using technology, this creates many amazing opportunities for schools, colleges, and teachers to benefit from integrating some forms of technology in the classroom and to make teaching and learning more effective. Here are some of the main benefits of using technology in the classroom. educational technology can help teachers and students - it provides benefits such as organization, efficiency, collaboration, communication, extra help, virtual experiences and so much more. Technology helps students, they like it better than paper and pen provides multimedia to address all learning styles provides interactive, student-centered activities provides extra support and help resources provides extra support and help resources Technology helps teachers organization and efficiency paperless finding less on resources collaborate with other teachers connect with parents

Introduction

The generation gap between today's traditional learners and professors presents a broad and interesting set of challenges for colleges and universities. However, there is a particular issue that the majority of decision-makers in the higher education sector agree upon. To be competitive, it is critical that institutions of today and tomorrow deliver advanced teaching and learning tools to encourage sustained engagement, and to give today's students and faculty the tools they need to be successful. Today, there is a common focus on raising student achievement while integrating technology as a tool. Policymakers and educators are renewing their commitment to programs and instructional practices to enhance maximum effects on instruction and student outcomes. Due to the large use of technology in the world in which we live, the use of technology in teaching and learning is essential if we are to make a lasting impact on how students learn. Technology can be a powerful tool for transforming learning. It can help affirm and advance

relationships between educators and students, reinvent our approaches to learning and collaboration, shrink long-standing equity and accessibility gaps, and adapt learning experiences to meet the needs of all learners. Our schools, community colleges, adult learning centers, and universities should be incubators of exploration and invention. Educators should be collaborators in learning, seeking new knowledge and constantly acquiring new skills alongside their students. Education leaders should set a vision for creating learning experiences that provide the right tools and supports for all learners to thrive. However, to realize fully the benefits of technology in our education system and provide authentic learning experiences, educators need to use technology effectively in their practice. Furthermore, education stakeholders should commit to working together to use technology to improve American education.

A Shift in Learning Methodologies –

Today's generation has grown up with technology as a natural means of social interaction and information exchange in the virtual universe of networking, learning, and entertainment. They like their communities and they like to work together toward common goals; they also like to know how close they are to their goals and what is expected of them to meet those goals. We expect objective measurements and assessments, defined rewards for defined amounts of work, and constant support and evaluation. These traits manifest themselves most obviously in academic settings. Faculty are expected to prepare team assignments, peer review, and team grading. An ideal project would be something that serves the public interest rather than individual interests. We prefer 24/7 online access to grades and course progress, and a final interactive group project or choice on a final activity. Furthermore, this generation does not respond well to a pedagogical teaching approach. They are used to hands-on multi-tasking and they are well-conditioned to digest vast amounts of information in entertaining and dynamic formats. Since early childhood, they have been bombarded with multiple multimedia stimuli and the expectation that they will naturally interact with technology. They are used to actively participating in learning groups and they are not hesitant to learn new applications.

Improves engagement –

When technology is integrated into lessons, students are expected to be more interested in the subjects they are studying. Technology provides different opportunities to make learning more fun and enjoyable in terms of teaching the same things in new ways. For instance, delivering teaching through gamification, taking students on virtual field trips and using other online learning resources. What is more, technology can encourage more active participation in the learning process which can be hard to achieve through a traditional lecture environment.

Improves knowledge retention-

Students who are engaged and interested in things they are studying are expected to have better knowledge retention. As mentioned before, technology can help to encourage active participation in the classroom which also is a very important factor for increased knowledge retention. Different forms of technology can be used to experiment with and decide what works best for students in terms of retaining their knowledge.

Encourages individual learning -

No one learns in the same way because of different learning styles and different abilities. Technology provides great opportunities for making learning more effective for everyone with different needs. For example, students can learn at their speed, review difficult concepts or skip ahead if they need to. What is more, technology can provide more opportunities for struggling or disabled students. Access to the Internet gives students access to a broad range of resources to research different ways, which in turn can increase the engagement.

Encourages collaboration -

Students can practice collaboration skills by getting involved in different online activities. For instance, working on different projects by collaborating with others on forums or by sharing documents on their virtual learning environments. Technology can encourage collaboration with students in the same classroom, same school and even with other classrooms around the world.

Students can learn useful life skills through technology -

By using technology in the classroom, both teachers and students can develop skills essential for the 21st century. Students can gain the skills they will need to be successful in the future. Modern learning is about collaborating with others, solving complex problems, critical thinking, developing different forms of communication and leadership skills, and improving motivation and productivity. What is more, technology can help develop many practical skills, including creating presentations, learning to differentiate reliable from unreliable sources on the Internet, maintaining proper online etiquette, and writing emails. These are very important skills that can be developed in the classroom.

Benefits for teachers -

With countless online resources, technology can help improve teaching. Teachers can use different apps or trusted online resources to enhance the traditional ways of teaching and to keep students more engaged. Virtual lesson plans, grading software and online assessments can help teachers save a lot of time. This valuable time can be used for working with students who are struggling. What is more, having virtual learning environments in schools enhances collaboration and knowledge sharing between teachers.

Conclusion -

Many studies have shown the advantages of using technology in classroom instruction. Technology can be used as a tool for establishing meaningful projects to engage students in critical thinking and problem-solving. Technology can be used to restructure and redesign the classroom to produce an environment that promotes the development of higher-order thinking skills. Technology also increases student collaboration. Collaboration is a highly effective tool for learning. Students cooperatively work together to either create projects or they can learn from each other by reading the work of their peers. One study that was conducted to determine whether Wiki technology would improve students' writing skills in a college English as a foreign language writing class showed benefits to using Wiki technology. Students were invited to join a Wiki page where they would write and 5 post passages and then read and respond to the passages of their classmates. Students participating in the study reported that their receiving immediate feedback from the instructor was a benefit of using this form of technology. To reiterate, technology integration has the following benefits: 1) increased student motivation; 2) increased student engagement; 3) increased student collaboration; 4, increased hands-on learning opportunities; 5) allows for learning at all levels; 6) increased confidence in students, and 6) increased technology skills.

Literary Contribution of Indian Women

Prof. Nitin Ramesh Rao Bhingare
H.O.D. (Sociology), Mungasaji Maharaj Mahavidyalaya, Darvha, Yavatmal

PREFACE

An Indian women is such person whose word is a historical piece that appears from ancient Vedic times! The Indian women was engrossed in it. Due to her lack of education in her place, the door of education opened up for the women in the modern era in the name of an ancestral culture, and if a women in the age of hereditary supremacy came to light in the new light of knowledge, we should do exactly as she pleased. By the showing of her knowledge, not only the national level is a sigh of her great knowledge 'Striratra' denanya international level emerged as the Indian land. In India, some women of India went on to excel in the fields of religion, science, education, art, business, politics social and social issues. On the basis of knowledge, Indian society has contributed significantly to life. While studying the history of Indian women, how can one go regardless of their contribution? Because of these great women, the Indian women created modern India by removing her traditional image of 'Chool and child' and made India on a firm and strong foundation, because of their familiarity with Indian history to the world, their contribution to nation building is honorable. She was the one who stopped contributing to progress and contributed to India's development whether it is through Sahitya (Literature), through politics or through economics, today no women is behind in any fields, she has worked for the creation of Abhinav Bharat by denying her own backwardness.

1) Mirabai

The women known as the great Krishna devotee saint poet is Mirabai her contribution to history is evident in their language. 'Payoji maine ramratan dhan payo' construction of Mirabai is still in the memories. We can find out construction of Mirabai in the Rajsthani, Gujrati, Panjabi language the combination of different language in their linguistic style.

2) Muktabai

Muktabai called 'Tatiche Abhang' her Abhang is still remembered for her actions. The younger sister of Dnyashwar created her own separate identity. Muktabai and Chnagdev have expressed their relationship with the Guru. In their Gatha there are 42 Abhang of Mukatabai. They sows the mark of Yoga in the Abhanga. The height of spirituality, emotions the clear speech and the fearlessness. At 13 century she has made an important contribution to the History.

3) Bahinabai Chudhari

The characteristics of the Bahinabai Chaudhari is that she is illiterate. She was born illiterate despite being illiterate because she had a natural birthright. She grow grind on the caste-he grows poignant poetry of her life. She said the sadness of her life was her sadhana. The poem depicts heartbreaking depictions of Maher, Sasar, Agricultural Life, Kinship, Janma, Marutu, Devache Astitv. 'Are sansar sansar, maan vadhay vadhay etc. Bahinabai Chaudhary become important in the work history.

4) Savitribai Phule

Savitribai Phule has done important work in the field of adventure. She was not only a social reformer but also poetess, poet. She made history from her poetry. The first Indian poet and the first modern poetess, to paly the role of Indian women reformation. Savitribai's creativity and poetry were iconic. It is only at the age of 23. In 1854 she published a collection of 41 stanza. It called 'Kavyafule'. In 1891 'Bawan Kashi Subodh Ratnakar' wrote a poem of 52 stanza. Likewise the subtle variations of the Sanskrit 'Shivmahima Stoti' on the subject of ovec in Marathi are also very important.

5) Anutai Wagh

Anutai Wagh is one of the great social worker who are famous for their work for a tribal community. Without having a husband she scarified herself for the work of society support. The martyrs created by Anutai include Kuranshala, Vikaschya Margaver, Shikashan Mishranmala, Ajab Sathbahai, Aatpat Nagrai, Skas Aahar Geete, Tilluchi Karamat, Koasbdchya Tekadiwarun, Guru Mauli Sandesh,

Studies in Indian Place Names (UGC Care Journal)

ISSN: 2094-1114

Vol. 40, Issues 1-4, February 2020

Sahajshikshan, Vikaswadi Darshan etc. she edited the magazine *women walking* 'Savitha'. Therefore in order to be honored she was honored with the Padma Shri given 1985, modern Indian has taken different turn.

6) Mahadevi Verma

Mahadevi Verma is the poetess and Hindi writer who is the recipient of the most respected Dnyapith Award in the field of literature in 1982. She was given the award for 'Yama' and 'Deepshikha'. The psychological meeting of her writing in her specialty, 'Tilhar' is the first collection of poems. After that she wrote poem like Rashmi, Gita, Sandhyageet, Yama, Deepshikha, Saptpadi, Saugandha etc. at the same time she wrote the collection of drawings from the past film *Savitha Ki Rekha*, *Mata Parvati*, series article, *Shrunkala Ki Kadli*, *Kashida*, *Sahitya Ki Ashta* these three early articles. She was honored with the Padma Bhushan for her outstanding contribution to women's life and her stories, pain, inequalities, grit, superstitions.

7) Amrita Pritam

Amrita Pritam is the author who brought the winds of modernity into the Indian politics. She created her entire adventure from mother tongue, Punjabi. They were the witnesses to the brutality of the partition, the brutal atrocities committed against women. It was from this that the poem 'marchhaha' was born. They were rewarded for their bold work of 'Rang Ki Canvas'. In 1976 received the Dnyapith Award. The first women to receive this award and her name as Punjabi writer has become a celebrity in Sahitya Vishwa. She recounts her experiences as a Rajya Sabha member from a biography entitled 'Rasid Ticket'.

8) Mahasweta Devi

She was known as in Indian Literature. She is the author who fought for the unjust society. She is an equally well-known social worker of the Dnyapith Award winning the Bengali writer. Her novels are *Noti*, *Amritsanchay*, *Kavi Vandhy*, *Gandh Jivan*, *O Mitu*, *Hajar Choursi Maa*. Her portrays the struggles, rebellions and misery of the backward elements of the society. Not only did she stop writing but also she never looked back to spend all her income to get justice for these social elements. Her work for those who dismissed the allegation that the society was inherently criminalized was recorded worldwide. She had received the Padma Shri, Magses, Sahitya Akadmi and other.

9) Arundhati Roy

Arundhati Roy is the first Indian woman to receive the title of 'Booker'. The twin emotion, family, social political indifferences destroy their life such a live picture she put up her novel. Receiving her first book 'God of Small Things' award for International frame. She was actively involved in the follow-up movement, Narmada Bachao Andolan.

10) Taslima Nasreen

Taslima Nasreen is a Bengali author. She revolted from her writing against Sanatan Dharma Sanstha. Her novel 'Lajja' came to prominence but she had to go to underground and take a shelter in Europe. Her autobiography was certainly controversial in 'Amar Melwela'.

11) Shanta Shelke

The famous poets of Shanta Shelke, who have left the genre of comedy and drama, have handled all the melodious forms with strength. *Anoli*, *Kalyanche Diwas*, *Phulanchara Rati*, *Gondan*, etc. are the collection of poems. *Ooth*, *dharma*, *Narakashis*, *Maza khel Mandu De*, *Swapnatarang* etc. novels, *Aarshyatil Ani*, *Chimanchara*, *Zopeche Gav* etc. child literature. Her authorized the autobiographical lyrics 'Dhulputi'.

12) Durga Bhagwat

In 1975, Durga Bhagwat received the honor of sitting in chair of All India Marathi Sahitya Sammelan, which was held at Karad. She has a famous novel on 'Mahanadicheya Travar' she wrote *Rajaramshastr* Bhagwat character, *Anasani*, *Kashmiri*, *Gujrati*, *Punjabi* folklore etc.

13) Godawari Parudekar

Godawari Parudekar is known as a famous writer and social worker she was awarded the Societ Desh Neharu Award for Sahitya Akadmi Award for her book 'Jewha Manus Jaga Hoto'.

Studies in Indian Place Names (UGC Care Journal)

ISSN: 2274-3114

Vol-41, Issue-35, February-2020

14) Indira Saini

Indira Saini received the award of Sahitya Akademi for her poetry collection 'Garbhreshm'. Her Chinkala, Chinku, Balulaya, Mendi, Shela Ranghewari, Mrugel, etc. poetry as well as 'Yemali' and 'Kandil' are the famous novel.

15) Kumud Pawde

The first Dalit was honored as Shankaracharya by Sanskrit Kumud Pawde. Her 'Antaspur' autobiography is famous.

16) Sarojini Babar

Named as talented writer, Sarojini Babar is famous for her many books. Among them Anita, Ashen As Zal, Ashich ek ek Azharwan, Asu De Mi Khudi, Aaichi Pire, Azharay Tevadh Sangley, Priyadarshni are the famous books.

Apart from this a list of the work of women in Indian History and Sahitya Vishva should be given only if they include Malli Dandekar, Pratibha Ingole, Girija Kir, Rohini Gawhankar, Kamlabai Tilak, Sindhu Dange, Aruna Dhare, Chhaya Datar, Janyana Devdhar, Jyotsna Bhole, Tara Bhawliker, Jyoti Mahpsekar, Vijaya Rajadhykshah, Pratibha Rande, Vijaya Wad, Sarojini Vaidya, Malika Amar Sheikh, Indramati Shewade, Sumati Deshpande, etc. these women are included. These women tried to modernize India by throwing light on the untouchable caste system, social structure and other areas of India through Indian History and Tradition. With this the emergence of the new India, and there is no doubt that their signature will be used today, tomorrow, and beyond.

CONCLUSION

Women have been an important contributor in the history of modern India. It is on this basis that you get to see modernity today.

- 1) Self-esteem among women has been awakened and it shows a different position.
- 2) Women began to meditate on various issues-women awakened without knowing that various seminars began to participate in conferences.
- 3) Due to the awareness of women, she has given India the status of modernity by giving her outstanding performance in various fields of society, finance, art, culture, politics.
- 4) Reading out fashioned tyranny of self-immolation at the expense of self-understanding.
- 5) In order to make our work known to all, we created women's associations to create the human life of the male dominant culture by shoulder to shoulder.

Abstract

This paper investigates the open access initiatives in terms of open access repositories developed by using E-prints especially devoted to Journal Articles, Conference and Workshop Papers, Theses and Dissertations, and Books, Chapters and Sections in books for scholarly communication in India. Relevant data from OpenDOAR was analyzed to study the status of open access in India.

Keywords: Open Access, Repositories, E-Prints, OpenDOAR

Introduction

Rapid advances in information technology have brought about paradigm shifts in various aspects of the information environment that have impacted library systems, information services and forms of scholarly communication channels. One of the most important paradigm shifts in scholarly communication process is the rise of e-publishing and open access to information.

Open access (OA) means free access to information and unrestricted use of electronic resources for everyone. Any kind of digital content can be OA, from texts and data to software, audio, video, and multi-media. While most of these are related to text only, a growing number are integrating text with images, data, and executable code. OA can also apply to non-scholarly content, like music, movies, and novels.

A publication is considered in Open access if:

- its content is universally and freely accessible, at no cost to the reader, via the Internet or otherwise;
- the author or copyright owner irrevocably grants to all users, for an unlimited period, the right to use, copy, or distribute the article, on condition that proper attribution is given;
- it is deposited, immediately, in full and in a suitable electronic form, in at least one widely and internationally recognized open access repository committed to open access. (UNESCO, 2020)

The term open access has been defined differently by different authors. P. Suber states that open access content is “digital, online, free of charge and free of most copyright and licensing restrictions. What makes it possible are the internet and the consent of the author or copyright-holder”. (Suber, 2003)

E-Prints

E-Prints is a free and open-source software package for building open access repositories that are compliant with the Open Archives Initiative Protocol for Metadata Harvesting. It shares many of the features commonly seen in document management systems, but is primarily used for institutional repositories and scientific journals. EPrints has been developed at the University of Southampton School of Electronics and Computer Science and released under a GPL license. (Tansley & Harnad, 2000)

OpenDOAR

OpenDOAR stands for Directory of Open Access Repositories. It is a UK-based website that lists academic open access repositories. It is searchable by locale, content and other measures. (Michael, Charles, & Fytton, 2008)

Objectives of the study

This study aims to explore the open access repositories in India developed by using E-Prints. Specific objectives are as follows:

- To explore the status of open repositories in India;
- To find out Institutional and disciplinary repositories.
- To find out subject wise repositories.
- To identify interface language wise and language wise repositories.

Scope of the study

This study was limited to the institutional repositories devoted to Journal Articles, Conference and Workshop Papers, Theses and Dissertations, and Books, Chapters and Sections in books developed by using E-Prints and registered in the OpenDOAR in India.

Analysis of the data

Following table presents the data collected from OpenDOAR.

Table No. 1: Repositories in India developed by using E-prints registered under OpenDOAR

Sponsored by: ICSSR and Held on 29-30 January 2020.

Articles, Conference and Workshop Papers, Theses and Dissertations, and Books, Chapters and Sections in books.

Further from the analysis of the data it is observed that out of total 29 repositories, 25 repositories are institutional while remaining 4 are disciplinary repositories.

It is observed that interface language of the all the repositories is English while only one repository is also available in Arabic language as an interface along with English, namely ICRISAT Open Access Repository (OAR) is available in English and Arabic.

It is also observed that the literature preserved in all the repositories are in written in English language while three repositories namely Etheses - A Saurashtra University Library Service is preserved literature of English and Gujarati languages, ICRISAT Open Access Repository (OAR) possessed the literature written in English and Arabic languages and Open Access to Odia Books (OAOB) has literature of English and Odia languages.

Further it is also clear that the repositories belonging to the subject science and technology is more as compare to arts and humanities.

Conclusion

The repositories in India are growing and performing well. There should be national open policy in India on the lines of NIH open access policy of United States. While the institutions, academies and scholars in India are making their research output open access. However, with the recent launch of ETD at INFLIBNET by UGC and National Digital Library of India by MHRD, India would be a great boost to the open access movement in India but is long way to go.
