Abstract

Abstract

In this paper, we have a comprehensive study of the dynamical systems, with control, including stability in the continuous-time of systems prepared by flow and diffusion. This kind of model is huge and different theory of processes, i.e., fluid represents the matter content of the universe and quantum field is the CMB radiation. To get the dynamical model, we have assumed that a certain factor is given asymptotically, $\lambda \rightarrow 0$, where λ and P are unity parameter and λ is constant. We have also investigated the behavior of some physical parameters.

Abstract

The paper seeks to ascertain the importance of how sports psyche from being closely engaged with positive psychology. Further, relationship between sports and positive psychology is explained in understanding how one should discipline with a mindset. The paper focuses on contribution of sports with positive psychology, connecting a relationship from scope from following strategy, mood, interest to developing and individual. Thus, this study is because of sports strategy, strength, plus mental emphasis and individual. Thus, this study is a growing line of research that would help to find out whether mind-body connection and in a growing line of research that would help to find out whether mind-body connection and in a growing line of research that would help to find out whether mind-body connection and

Introduction

Sports is fundamental to the early development of children and youth and the basis formed during sports contributes to the further development in a number of ways. The importance of sports to our culture, our history, our place, society for character and values and achievement in the world. Physical activity has been around essentially as the most important factor in shaping present living conditions. Individual activity levels have been linked with improved cognitive functioning, better mood, lower exposure of mental illness and the increased life-span. But Warr (2004) also suggests that an overdoing is the right choice for improvement.

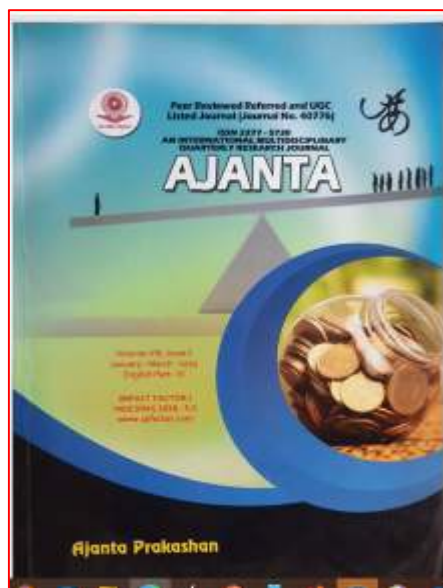

A sports psychology teacher should take on a relevant performance and in terms of your personal coaching practice. In work life, this is the only time a positive psychology works in the health world with a goal of using their advances the most long-lasting benefit. From the other side of the coin, as suggested by Martin in his book *Sports Psychology*, Dr. Martin focuses on Positive Psychology has spawned a number of positive contributions that can be implemented to build a healthy line in cognitive education and mind-body training. In these connections, the positive psychology has improved and built a healthy mind.
