REVIEW ON THE PHARMACOLOGICAL APPLICATIONS OF BENZIMIDAZOLE DERIVATIVES

Nidhi D. Mahurkar
Assistant Professor, Department of Chemistry,
K. J. Somaiya Institute of Technology & Sciences (KJSSIT)
Thane (W), Maharashtra, India

Abstract:
Benzimidazole and its derivatives find a wide range of applications in various fields. This review article discusses the pharmacological applications of benzimidazole derivatives. The article covers the synthesis, properties, and pharmacological applications of benzimidazole derivatives. The article also discusses the importance of benzimidazole derivatives in the field of pharmacology.

Keywords: Benzimidazole, derivatives, pharmacological applications.

Introduction:
Benzimidazole is a heterocyclic compound consisting of a benzene ring fused to an imidazole ring. It is a white solid with a melting point of 124°C. Benzimidazole is a weak base and a weak acid. It is a good solvent for many organic compounds. It is also a good reagent for the synthesis of many organic compounds.

Pharmacological Applications:
Benzimidazole derivatives find a wide range of applications in various fields. They are used as drugs, dyes, pigments, and polymers. They are also used in the synthesis of many organic compounds. Benzimidazole derivatives are used in the treatment of various diseases, including cancer, HIV/AIDS, and tuberculosis.

Conclusion:
Benzimidazole derivatives find a wide range of applications in various fields. They are used as drugs, dyes, pigments, and polymers. They are also used in the synthesis of many organic compounds. Benzimidazole derivatives are used in the treatment of various diseases, including cancer, HIV/AIDS, and tuberculosis.

Analysis of Water Quality Using Physico-Chemical Parameters, Jamwadi Reservoir in Yavatmal District, MS, India

P. H. Bhagwat

Assistant Professor (A Chemistry), Mangasaheb Mahasabale Dnyaneshwar, District Yavatmal, Maharashtra, India

ABSTRACT

Jamwadi Reservoir is a small pond reservoir located in the village Jamwadi, District Yavatmal, Maharashtra, India. It is a construction above the water flow of Yavatmal apart from the surrounding areas. Physico-chemical character of the Jamwadi Reservoir pollution studies have been studied from February 2021 to March 2021. Apart from microorganisms in the reservoir, it is not suitable as well as sufficient for the growth of aquatic plants. The above study suggests that the Jamwadi Reservoir tends to multiply somewhat below the class of mesotrophic water bodies. Therefore, apart from the administration of this water body, management is also needed. At the same time we will study about chloride, total hardness, HCO hardness, Ca hardness, alkalinity, temperature, pH, potassium.

Keywords: quality, trophic status, physicochemical, chloride content, nutrients.

1. INTRODUCTION

Water investigation is population expansion, the height of the water is mainly due to the lack of natural resources. Water is the most important natural resource, in addition to valuable natural resources, human needs are also needed. For this purpose, proper scheduling, improvement and administration are required for its use. However, studies of environmental sciences and the environment are often seen as counter-development as well as contrary to natural development and human well-being, and are viewed with skepticism and are generally doubting. The tropical state of the body of water depends on the neighborhood and the landscape. It is essential for all kinds of life, food production, economic growth and global well-being. Due to the amazing expansion of engineering and agriculture, aquatic plants and

organisms have spread more and more in recent times, and despite all these things, wherever they occur, they all face local stress: increasing industrial urbanization, and development work bring in this inevitable water stress to counter population explosions. The health of the lakes and their biodiversity is linked to the physical condition. In freshwater enterprises, the importance of nutrients plays the most important role in their outline, extends from eutrophication to stratification. Excessive macrophyte plant life, which also promotes eutrophication of aquatic. Testing Water Excellence is the first source to keep and protect samples in the aquatic environment. It is also true that the purpose of any aquatic habitat network is to protect the human, which can adequately withstand the physicochemical characteristics of water. Therefore, according to the present study, an attempt has been made to study the physicochemical parameters of the Jamwadi reservoir in
